DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 20-34, 51, 52, drawn to system and method employing loading arm, transfer arm, pipette tip with filter barrier, classified in class 73, subclass 863.82.
- II. Claims 35-40, 53, drawn to device including hollow chamber, hollow piercing tip, filter barrier engaged to inner walls of the hollow chamber, side vent and deflector plate, classified in class 73, subclass 863.85.
- III. Claims 41-49, 54, drawn to device including hollow chamber, filter barrier engaged to inner walls of the hollow chamber, and hollow piercing tip with end blocking excess sample from entering into a side vent, classified in class 73, subclass 863.85.

Claims 1-19, ⁵⁰~~51~~ and 55 are considered linking claims linking the inventions of groups II and III and will be examined with either of these groups if elected.

12 3/14/03

Inventions I and II, III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require

the filter barrier engaged to inner walls. The subcombination has separate utility such as a pipette used in manual sampling.

Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require the hollow piercing tip end to block excess sample from entering into a side vent. The subcombination has separate utility such as a sampler with no need of a separate deflector plate.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II or III and the search required for Group II is not required for Group III, restriction for examination purposes as indicated is proper.
